

## SAF LOK™ HANDCUFFS

DESIGNED FOR OUTSTANDING SECURITY & SAFETY

LITHGOW ARMS BATTLE PROVEN SINCE 1912

**SAF LOK™ MK5**

# **SAF LOK™ HANDCUFFS**

DESIGNED FOR OUTSTANDING SECURITY & SAFETY

## **EASY TO USE**

SAF LOK™ Mk5 handcuffs are simple to fit and double lock. The smooth ratchet action ensures that the handcuffs can be applied to large and small wrists with minimum effort.

The double locking is by fingertip. Because double locking does not require a key, control of the subject is gained without loss of momentum.

In stressful tactical situations, the law enforcement officer is free to concentrate on the rest of the mission as soon as the cuffs have been applied. The user-friendly locking system also enables the officer to reset the cuffs quickly on removal, ready for reuse.

## **SECURE**

The cuff has a unique tumbler lock that is more resilient to tampering than other cuffs on the market. Unique keys offer improved pick resistance.

## **STRONG**

Every law enforcement officer needs a set of handcuffs whose design is optimised to deal effectively with all law enforcement situations. One-piece casting of cheek plates, locking arms, swivels and links provide a stronger handcuff than models with laminated plates, rivets and welds. The cuffs are tensile tested to NIJ international standards.

## **LONG LIFE**

High quality long-life equipment represents security for the officer and value for the purchasing agency. Money saved by purchasing long-life equipment can be used to meet other priorities. Using one-piece casting techniques during manufacture instead of pressed steel, ensures long life of the handcuffs.

## **MK5**

SAF LOK™ Mk5 handcuffs are an enhanced version of the SAF LOK™ Mk4 handcuff. The hinge design provides for a semirigid handcuff permitting restricted movement of the subject's hands in one direction only. Restricted movement means less likelihood of the subject inflicting self-injury. The design of the handcuff provides a convenient grip for the law enforcement officer to effectively gain control of an unruly subject. Even if the handcuff ratchet arm is sawn through, the ratchet will stay in position until unlocked. The body of the handcuff is manufactured from cast, high-grade stainless steel and it also serves as the body of the lock making it a very unique design. The arm, links and link pins are also manufactured from stainless steel.

SAF LOK™ handcuffs have been developed by Lithgow Arms to conform to the stringent design parameters of the law enforcement community. SAF LOK™ handcuffs are manufactured at our Lithgow light engineering facility and are currently in service with Australian law enforcement agencies.

## CAPABILITIES

### **MK5**

- Multi-pinned lock mechanism
- One-piece stainless steel cast body construction
- Interchangeable key with SAF LOK™ Mk4 handcuffs
- Increased range of fitment
- Reduced range of movement inhibits lock tampering
- Keyless fitting and double locking
- Hinge design reduces movement and increases leverage for user to resist offenders or self-harmers.
